Cloud Integration Services

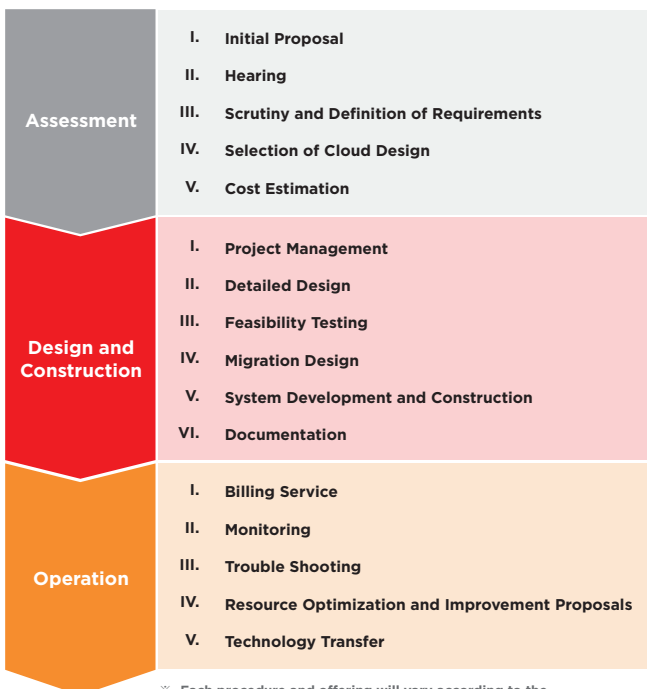

PROFESSIONAL SYSTEM DESIGN AND OPERATION SERVICES FOR AWS, AZURE, GCP, OCI AND MORE.

Find the best solution with Equinix. Closest to the cloud.

Cloud integration services provide technical support for system design, maintenance operations, and billing management when using cloud services.

A team of engineers familiar with our interconnection services, as well as cloud services, can provide fast, streamlined technical consulting on a wide range of customer requirements.

Customers can utilize our one-stop support process through our selection of cloud design to system design and operation support, as well as a necessary partial support according to the implementation phase.

※ Each procedure and offering will vary according to the customer's requirements.

Features of the service

Multi-Cloud Support

It supports major public clouds such as AWS, Azure, Google Cloud Platform, and Oracle Cloud infrastructure, as well as multi-cloud and hybrid clouds from each CSP.

Extensive consulting services

Our menu includes everything from comprehensive cloud consulting to migration, refactoring, re-architecture and monitored operations design.

Building a low-latency, secure system

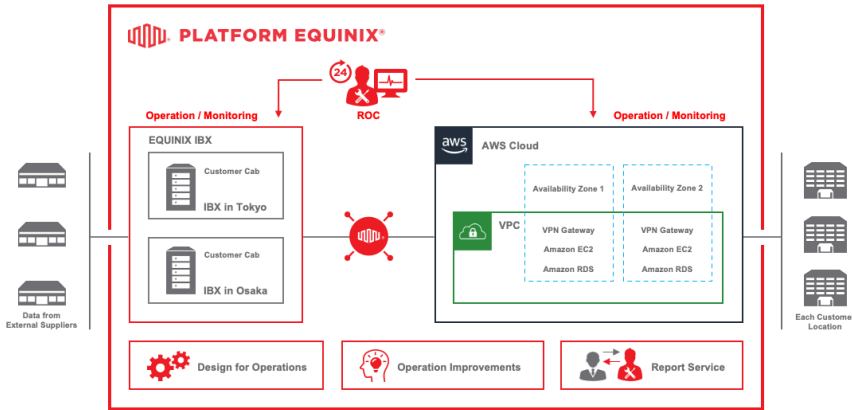

Our direct interconnection services with various public clouds, including ECX Fabric, support the construction of low-latency and secure system.

EQUINIX

Use Case 1. (Cloud Migration Re-write)

For the customer who wants to outsource the operational load of their infrastructure except for the application layer

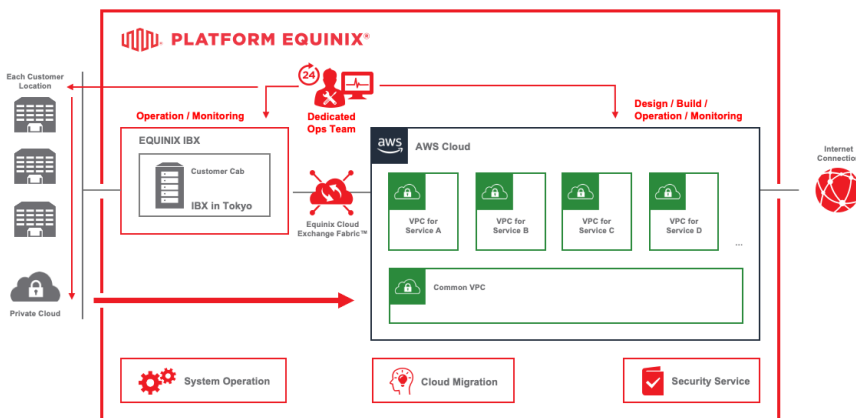

Points of design

- “Re-Write” mainframe EDI infrastructure to a public cloud environment
- Outsource the entire operation to focus on “Re-Write”.
- Providing hybrid monitoring services for public cloud and data center systems

Use Case 2. (Cloud Migration Lift and Shift)

For the customer who wants to migrate quickly from a large on-premise private cloud environment to streamline operations with AWS

Points of design

- Migrating a number of key commercial services to AWS
- Dedicated ops team manages the entire process from the assessment to building the entire migration design
- Providing security services, including vulnerability assessment services
