EQUINIX® | FABRIC™

Connect digital infrastructure at software speed

Scale your services globally without additional capital expense to meet customer demand, create new revenue streams and drive innovation.

How digital business connects

Expand and optimize your services by interconnecting seamlessly with thousands of customers, partners and top-tier service providers worldwide using Equinix Fabric.

The on-demand, software-defined interconnections that Equinix Fabric enables across Platform Equinix® power your success forward by increasing the security, speed, flexibility and agility of your entire digital infrastructure. Deliver value in new ways while lowering the cost and burden of managing all of your infrastructure connections yourself through one connection to the world. Equinix Fabric is available in 50+ metros on five continents.

Features

Speed
Provision new, software-defined interconnections for your customers in minutes (vs. months) through a portal or APIs for quicker response to business demands and faster product portfolio expansion.

Reach
Expand globally and regionally to meet customer demand in 50+ metros on five continents. Grow cloud and network interconnectivity via an ecosystem of thousands of service providers, including leading IaaS, PaaS and SaaS providers.

Flexibility
Adjust customer bandwidth on demand, without restrictive contract terms, and provision interconnections to multiple service providers in as many locations as needed.

Ease
Manage your customers' Layer 2 and 3 connections and services in your existing management and automation solution.

Reliability
Ensure your customers' application performance by deploying private, direct interconnections globally at the edge.

EQUINIX | FABRIC™

Optimize your infrastructure

Simplify and aggregate access to your services
Offer access to your network and services using programmable, secure, software-defined interconnections.

Make your services accessible to new customers
Leverage the reach of 10,000 Equinix customers worldwide waiting to connect and use your services.

Expand your reach into new markets
Reduce complexity by connecting from a single port to your global ecosystem of customers, partners and providers.

Provide flexible, private connectivity to leading cloud services
Support your customers' hybrid cloud or multicloud strategies with scalable, flexible interconnection to leading cloud providers.
