

MADRID METRO

MOST-CONNECTED, CARRIER-NEUTRAL FACILITIES ON THE IBERIAN PENINSULA

As digital transformation drives the distribution of services and controls closer to customers, employees, partners and ecosystems, the Iberian Peninsula is fast becoming an essential hub on the global connectivity map. This is due to its physical location between Africa, Mediterranean Europe and Northern Europe, and its strong cultural connection to Latin America.

Spain represents a large domestic market with more than 46 million consumers and a world-class infrastructure. As the capital of Spain, Madrid is the third most-populated city in Europe and home to the country's main political, regulatory and administrative institutions.

Our two International Business Exchange™ (IBX®) data centers in Madrid (MD1 and MD2) are business hubs for 200+ companies, enabling businesses to build a digital edge alongside the largest industry ecosystems on Platform Equinix®. With upwards of 60 carriers providing network connectivity services, customers can choose from 50+ local and global cloud service providers, including AWS, Microsoft and Google. Customers also benefit from direct connections to ESpanix—Spain's internet peering exchange.

Equinix can accommodate deployments from single cabinets to large, multi-megawatt installations. We also offer flexible configurations and power densities with resilient power supplies to ensure guaranteed uptime.

Equinix Madrid data center

The Equinix Madrid data centers consist of two buildings with 72,000+ square feet (6,675+ square meters) of colocation space. Powered by 100% renewable energy, these premium facilities offer scalable technical space and fully redundant power supplies that deliver leading operational resiliency and world-class security.

Why Equinix

- Interconnect with the largest industry ecosystems
- Optimize communications and exchange data with enterprises, content providers, and cloud, network and internet service providers
- Leverage Performance Hub™ to enable next-generation wide area network (WAN) architecture for secure and highly reliable connectivity to network, cloud and IT service providers
- Provide cloud and internet services quickly and easily to Equinix-deployed customers
- Interconnect with top content and digital media (CDM) companies to reduce latency and help improve user experience
- Certified to meet rigorous environmental and energy management standards
