

IT Guardian IT Security Consulting, SOC and Managed Security Services

Challenges:

- Risks of cyber threats are affecting organizations of all sizes and industries. The lack of defensive action will incite continuous attempts that result in serious damages. Businesses need to establish effective cyber protection to fortify their environment for quick detection and response against security incidents and cyber threats.
- However, experienced security professionals are one of the scarcest resources in today's IT industry. While most businesses do not have in-house security experts to manage their security problems, they face the increasing need to effectively assess the risk postures of their IT infrastructure, web applications and enterprise applications. Other challenges include: devising effective means to defend and detect the ever-mutating cyberattacks, DDOS, APTs, and even insider-threats; having the ability to efficiently log and analyze security incidents for risk mitigation, remediation and audit to meet security policy compliances; and more. Besides security solution implementation, they also need expert help in security risk assessment and audit (SRAA), consultation and training to strengthen their security management and operation processes. In a nutshell: they need tailored managed security services to meet their specific requirements. For mission-critical environments, they may require total Security Operations Center (SOC) services to ensure service availability, prevent loss of important information and enable fast operational recovery from security incidents.

GTI IT Guardian Overview:

- **GTI IT Guardian** security practice comprises of a dedicated team of experienced and certified security experts equipped with advanced solution framework, efficient tools and proven best practices to act as your trusted advisor to safeguard your complex IT environment and critical data assets.
- Besides IT security, GTI is an all-rounded solution integrator with strong expertise and experience in all IT domains including: systems, networks, storage, virtualization, databases, enterprise applications, mobility, big data, cloud computing and others. This breadth and depth of knowledge helps you cope with the most complicated IT security challenges you will face in today's complex hybrid IT environment. We are here to help you build the required security and protection into your computing environment, as it evolves to cope with new needs.

- We provide a comprehensive range of security consulting, planning, design, support and managed services to satisfy your changing needs throughout the threat protection life cycle, while enhancing your operation efficiency and meeting your security policies and compliance needs.
- The GTI security solutions and services are built around our proven GTI Threat Protection Framework, which is powered by best-of-breed solutions from our strategic, industry-leading technology partners. We provide the solutions that best suit your specific environment and needs.

GTI IT Guardian Services

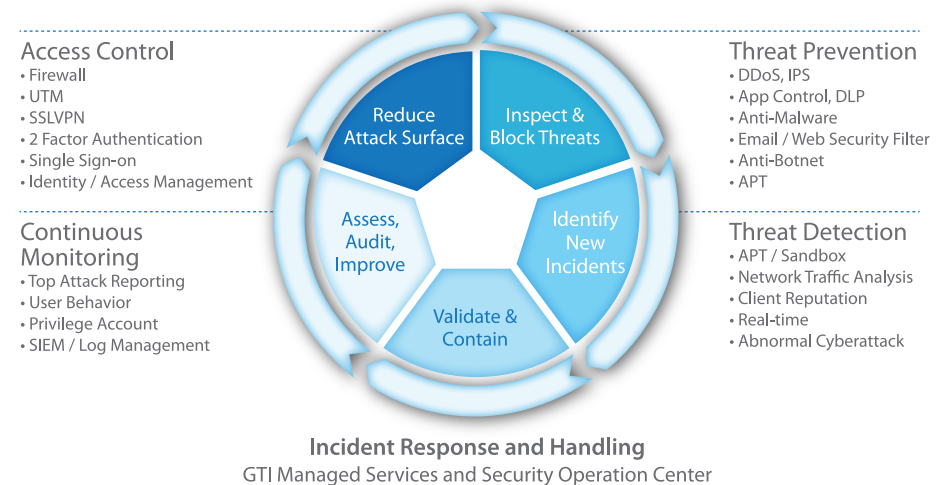

The GTI **IT Guardian** Security Practice comprises of veteran security professionals accredited with certifications of CISA, CISM, CISSP, PMP, ITIL and forensics expertise not found in other system integrators or cloud service providers. Our complete portfolio of threat protection life cycle services ranges from IT security consulting, security risk assessment and audit (SRAA), penetration test, to user threat assessment, solution design and implementation. It is further bolstered by our broad range of tailored managed security services to enhance the security and efficiency of your IT operations and meet your compliance needs.

- **Security Operations Center (SOC) support services** — Support customers in the detection, analysis, investigation and response of logged events triggered through security-related correlation logic. Managed by experienced security professionals and empowered by proven processes and leading-edge technologies, our SOC provides enterprises with 24x7 support to safeguard their businesses by defending against breaches and malicious attempts. We help enterprises overcome security challenges through integrated technologies, threat intelligence, and flexible managed services designed to meet their business demands.

- **Security Risk Assessment and Audit (SRAA)** — Provide SRAA services for different IT systems and components to satisfy security policies and meeting compliance needs. Businesses can opt for this service during the implementation of new systems or components – without jeopardizing any security loopholes until the next assessment and audit.
- **Managed Security Services** — Offer varied managed security services to help customers establish security perimeters against ever-evolving cyber threats, backed by security professionals and leading security solutions tailored to meet specific business needs. Our flexible offering provides token-based subscription services for remote device configuration, including policy and patch management. Critical security and appliance health event notification is available with our 24x7 helpdesk support. Monthly security and appliance health monitoring report is also offered, augmented with optional device provisioning and deployment services.
- **Security Incident Handling Services** — Provide remote and on-site investigation to help businesses mitigate and quickly restore their business operations from security incidents. We help our customers plan, prepare and drill their incident handling mechanism, to enable both proactive and reactive responses to incident handling mechanism. For businesses which are using GTI SOC standard/basic services, we also provide support for incident reporting and follow-up, including aftermath review and process enhancement.
- **Insider Threat Detection and Mitigation** — Focus on mitigating new security threats that others may have overlooked, including: insider threats caused by privileged users with shared administration accounts, third party service providers, careless users, infected accounts and other malicious attempts. Our **IT Guardian** practice addresses these effectively with leading-edge insider-threat detection and privileged account management solutions.

GTI Security Framework

Our solutions are based on the unique GTI IT Security Framework which covers the complete threat protection life cycle from risk posture assessment, access control, threat prevention and protection, threat detection, continuous risk monitoring, to analysis and mitigation, incident response and recovery, process and infrastructure improvement, and people training.
